

# WPA2 challenge #2

Attached, you will find:

1. A pcap file containing the 4-way handshake packets **WITH THE CLIENT MIC REMOVED** and the additional beacon packet.
2. A basic shell of the code.

Your goal is to calculate the client MIC from the other packets (the method is described in the background materials from the previous challenge).

**Note:** our implementation of all of the necessary cryptography are included under “utilities” .

The flag will be the MIC.  
Good luck!
