

Fast WPA2 challenge

Attached, you will file a server and partial client files. When connecting to the server, it will randomly choose a RockYou password, and send you the relevant information (MIC and other fields) needed to uncover it.

The client has 1 SECOND to respond with the correct password in order to get the flag!

Your goal is to use brute force in order to discover the password. You MUST use multithreading in order to succeed here!

Good luck!
