CTF Introduction

We are excited for you to start playing!

The goal of this CTF is for you to learn about an interesting vulnerability in WPA2, a wifi authentication protocol, that allows for brute-force and dictionary attacks.

Using this vulnerability, you will create a password cracker!

We hope you enjoy the challenges, and understand how important it is to pick strong passswords :)

DIsclaimer

Before we get started, it's necessary for you to understand that the methods used in this CTF could be used for commiting crimes, violating computer laws.
We present and use these methods purely for you to learn how to defend against these types of attacks, and NOT to enable crime.
Using these methods outside the CTF may result in disciplinary and/or criminal punishment.
procceeding with this CTF means that you understand this, and will act accordingly.
